

IALCCE 2020

The Seventh International Symposium on Life-Cycle Civil Engineering

27-30 October 2020, Shanghai, China

IALCCE 2020

*The Seventh International Symposium on
Life-Cycle Civil Engineering*

Nowadays, people have realized the importance of creating a sustainable society to avoid or alleviate problems like climate change, environmental pollution or economic crisis. Therefore, the life-cycle thinking of civil engineering is discussed more and more frequently.

Civil engineering is mainly focused on design and construction during the past days, but contemporary society needs civil engineering to pay attention to more aspects, such as inspection, monitoring, repair, maintenance and optimal management of structures and infrastructures, in order to effectively manage the function of these structures throughout their lifetime. Considering these needs, the objective of the International Association for Life-Cycle Civil Engineering (IALCCE) is to promote international cooperation in this field of expertise to enhance the welfare of society. Its mission is to become the premier international organization for the advancement of the life-cycle civil engineering.

Previous editions of the bi-annual IALCCE symposium took place in Varenna, Lake Como (2008), Taipei (2010), Vienna (2012), Tokyo (2014), Delft (2016) and Ghent (2018). The Seventh International Symposium on Life Cycle Civil Engineering (IALCCE 2020) will be organized on behalf of IALCCE under the auspices of Tongji University in Shanghai (China) on October 27-30, 2020.

All major aspects of life-cycle engineering are addressed, with special focus on structural damage processes, life-cycle design, inspection, monitoring, assessment, maintenance and rehabilitation, life-cycle cost of structures and infrastructures, life-cycle performance of special structures, and life-cycle oriented computational tools.

We are looking forward to welcome all of you in Shanghai in 2020!

Mini-Symposium MS-11:

Life Cycle Performance of Hydraulic Engineering

Objective of the Mini-Symposium MS-11

Yonglai ZHENG
Tongji University
Shanghai, China

Hongguang XU
Anhui Transport Consulting &
Design Institute Co., LTD
Hefei, China

Liu DON
Louisiana Tech University
Ruston, USA

Rujin MA
Tongji University
Shanghai, China

Zichao PAN
Tongji University
Shanghai, China

Water is one the most important resources to the national economic and social developments. The hydraulic engineering provides reasonable and effective distribution and utilization of water resources to the national economy. This SS is proposed to discuss and share recent academic research work and project studies in the field of hydraulic engineering. The topics of this SS include, but no limited to,

- (1) Novel hydraulic structures;
- (2) Theoretical analysis and numerical simulation of hydraulic structure under different loadings;
- (3) Durability issues of the hydraulic structures;
- (4) Project management and quality control; and
- (5) Influence of hydraulic engineering on ecology.
