

# IALCCE 2020

## The Seventh International Symposium on Life-Cycle Civil Engineering

27-30 October 2020, Shanghai, China

### IALCCE 2020

*The Seventh International Symposium on  
Life-Cycle Civil Engineering*

Nowadays, people have realized the importance of creating a sustainable society to avoid or alleviate problems like climate change, environmental pollution or economic crisis. Therefore, the life-cycle thinking of civil engineering is discussed more and more frequently.

Civil engineering is mainly focused on design and construction during the past days, but contemporary society needs civil engineering to pay attention to more aspects, such as inspection, monitoring, repair, maintenance and optimal management of structures and infrastructures, in order to effectively manage the function of these structures throughout their lifetime. Considering these needs, the objective of the International Association for Life-Cycle Civil Engineering (IALCCE) is to promote international cooperation in this field of expertise to enhance the welfare of society. Its mission is to become the premier international organization for the advancement of the life-cycle civil engineering.

Previous editions of the bi-annual IALCCE symposium took place in Varenna, Lake Como (2008), Taipei (2010), Vienna (2012), Tokyo (2014), Delft (2016) and Ghent (2018). The Seventh International Symposium on Life Cycle Civil Engineering (IALCCE 2020) will be organized on behalf of IALCCE under the auspices of Tongji University in Shanghai (China) on October 27-30, 2020.

All major aspects of life-cycle engineering are addressed, with special focus on structural damage processes, life-cycle design, inspection, monitoring, assessment, maintenance and rehabilitation, life-cycle cost of structures and infrastructures, life-cycle performance of special structures, and life-cycle oriented computational tools.

We are looking forward to welcome all of you in Shanghai in 2020!

### Special Session SS-10:

**Innovations and Applications of Composite Member/Material on Life-Cycle Bridge Maintenance and Rehabilitation**

### Objective of the Special Session SS-10

**Kunitomo Sugiura**  
Kyoto University  
Kyoto, Japan

**Chen Xu**  
Tongji University  
Shanghai, China

**Weiwei Lin**  
Aalto University  
Finland

**Junyan Wang**  
Tongji University  
Shanghai, China

**Zhiqi He**  
Southeast University  
Nanjing, China

Development and applications of composite structures\materials have been increasingly considered for the bridge construction, maintenance and rehabilitation, while the reliability and efficiency have drawn great concerns as a field in the research frontier. In this case, this session covers but not limit to the discussions on the innovations and applications of the high performance composite members, cementitious or FRP materials on the development of bridge construction efficiency, smart and reliable life-cycle maintenance and rehabilitation techniques. Besides, state-of-the-art studies concerning the topic is also covered in this special session.
